PROFESSIONAL SUMMARY

Frontend developer with 6+ years building responsive, accessible, data-heavy web applications, with deep experience in health information systems. On a national electronic medical records platform used across 180+ health facilities, I own the HTS, PMTCT and Triage modules and contribute across the HIV, Hepatitis and patient modules, building the dashboards, reporting tools and data-collection interfaces that clinical and program teams rely on. I have also helped shape the front-end architecture of the platform's new version and built its documentation site. I enjoy turning complex health data and workflows into clear, intuitive interfaces, and I work closely with backend engineers, information-management staff and non-technical stakeholders, including field monitoring visits to supported facilities, to get the details right. Strong on React and TypeScript, data visualization and performance at scale, with two years of backend work in Spring Boot and SQL reporting.

TECHNICAL SKILLS

Frontend	React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Responsive & Accessible Design
Data Visualization	Recharts, D3.js, Chart.js, interactive dashboards, charts, maps, reporting interfaces
UI / UX	Figma, design systems, component libraries, wireframing, usability for data-heavy apps
Integration	REST APIs, authentication, asynchronous data flows, real-time dashboard updates
Performance	Code splitting, lazy loading & virtualization, large-dataset rendering, Core Web Vitals
Backend & Data	Spring Boot (2 yrs), Java, PostgreSQL, SQL reporting queries, REST APIs
Cloud & DevOps	AWS, CI/CD (GitHub Actions), Git/GitHub, Docker, code reviews, deployment
Testing & Tooling	Jest, React Testing Library, Cypress, Storybook, Webpack, Vite
Ways of working	Agile/Scrum, technical documentation, stakeholder collaboration, distributed teams

PROFESSIONAL EXPERIENCE

Frontend Developer Oct 2023 – Present

LAMISPlus EMR · Data.FI Project · Health Information Systems

- Lead development of the HTS, PMTCT and Triage modules end to end, and contribute across the HIV, Hepatitis and patient modules, on a national electronic medical records platform used across 180+ health facilities with 2M+ patient records.
- Redesigned the data-collection interfaces for the modules I lead into faster, more intuitive workflows, improving reporting and data-collection completeness from around 50% to 97%, cutting patient queues and wait times, and easing the daily workload for data clerks and clinical staff through cleaner capture and simpler reporting.
- Built live dashboards that give facility staff real-time scores and data at a glance, removing the need to query the database manually each time and letting clinical teams make decisions instantly at the point of care; resolved reported issues to a 99% success rate, with the improvements widely welcomed by facility users.
- Integrated front-end applications with backend REST APIs and authentication systems, handling asynchronous data flows to keep dashboards and reporting views updated in near real time across multiple data sources.
- Provided technical support across facility deployments, triaging and resolving reported issues with lasting fixes, cutting reporting-related issues from around 65% of cases to 2%, most now resolved within minutes.
- Re-architected the front-end of the platform's new version toward a modular, micro-frontend approach, enabling team and program autonomy, independent deployment and fault isolation, and built a modular component library that cut development time by 40% across 10+ engineering teams while keeping the interface consistent as the platform grew.
- Created the platform's first public documentation website (an initiative I proposed and led), giving users and developers a single place to find current, up-to-date information.
- Built responsive, WCAG-conscious interfaces that work reliably across browsers, including older versions still used in some facilities, and remain usable in low-connectivity settings, so staff in under-resourced facilities are not left behind.

- Built the interface layer that validates data type, format and completeness before records are submitted to the National Data Repository (NDR), helping ensure only clean, correctly structured data reaches the government system.
- Take part in coordinated field monitoring visits to supported facilities and in community hackathons and technical bootcamps, turning the feedback and insights gathered into new features and improvements that raised overall system usability and efficiency by around 50%.
- Implemented lazy loading and virtualization for 2M+ record datasets, keeping large tables and visualizations smooth at 60fps, and cut server response time by 70%.

Frontend Developer

Aug 2022 – Oct 2023

Admoni Inc · Advertising Technology

- Led front-end development of a rewards-based advertising platform serving 100,000+ active users.
- Built an analytics-driven admin dashboard with data visualizations that raised conversion rates from 20% to 80%.
- Developed a reusable React component library that accelerated feature delivery across teams by 85%, and cut time-to-interactive by 50% through route-based code splitting.

Frontend Developer

Jul 2022 – Aug 2022

Calmglobal Infotech Ltd · Social Media Platform

- Built a social networking application with family-tree and family-history features.
- Led a 10-person front-end team on architecture decisions and engineering best practices, and championed TypeScript adoption, reducing runtime errors by 80%.

Frontend Developer

Jul 2021 – Dec 2021

Akl Solution (E-School) · Educational Technology

- Built a report-card templating system adopted by 500+ schools.
- Developed and maintained 20+ school websites, supporting an increase in student admissions from 40% to 80%.

Frontend Developer

Jun 2020 – May 2021

Grapevine Innovate Ltd

- Built a rental platform offering flexible payment plans to individuals and SMEs.
- Migrated a legacy React codebase to a modern React/TypeScript architecture, improved Lighthouse scores by 40 points and reached 75% test coverage.

EDUCATION

MSc, Information Management · Ahmadu Bello University, Zaria

Jan 2025 – Dec 2025

BSc (Ed), Chemistry · University of Ilorin

Oct 2015 – Oct 2019
