PROFESSIONAL SUMMARY

Front-end engineer with 6+ years architecting, building and maintaining enterprise-scale web applications in React and TypeScript. I build modular, scalable UI using component-driven and Atomic Design principles, and I have built and maintained a design system adopted across 10+ engineering teams. My work spans complex state management and data flow, highly optimized rendering, strict cross-browser and responsive delivery, WCAG accessibility, and code-level front-end security. On a national enterprise platform used across 180+ sites with 2M+ records, I delivered large performance gains and clean, reusable component architecture, and I partner closely with product, design and backend teams to codify designs into robust, maintainable front-end code. Backed by two years of backend work in Spring Boot and SQL.

TECHNICAL SKILLS

Frameworks	React, TypeScript, Next.js, JavaScript (ES6+), custom hooks, advanced state management (Redux Toolkit)
UI Architecture	Atomic Design, component-driven architecture, design systems, reusable component libraries, micro-frontends
Web Technologies	Modern CSS/Sass, semantic HTML5, responsive design, cross-browser compatibility, modern web APIs, animations
Performance	Optimized rendering, code splitting, lazy loading, virtualization, large-dataset performance, Core Web Vitals
Security & Accessibility	Content Security Policy, XSS prevention, data sanitization, WCAG 2.1 AA accessibility, security linters in Git workflows
State & Forms	Complex state architectures, dynamic forms, real-time data syncing, REST APIs, authentication
Testing & CI/CD	Jest, React Testing Library, Cypress, Storybook, GitHub Actions, Docker, automated builds & deployment
Backend (supporting)	Spring Boot (2 yrs), Java, PostgreSQL, SQL, REST API collaboration

PROFESSIONAL EXPERIENCE

Front End Engineer

Oct 2023 – Sept 2026

LAMISPlus EMR · Data.FI Project · Enterprise Health Platform

- Architected and maintained reusable, highly modular UI components using component-driven / Atomic Design methodology on an enterprise platform used across 180+ sites with 2M+ records, building a design system adopted across 10+ engineering teams (40% faster delivery).
- Managed complex state and data flow across the application, keeping large, data-heavy views synchronized and highly responsive.
- Built highly performant front-end architecture with optimized rendering: code splitting, lazy loading and virtualization that kept 2M+ record views smooth at 60fps and cut server response time by 70%.
- Delivered user-centric interfaces with strict cross-browser compatibility and responsive design, usable even on older browsers and in low-connectivity settings.
- Implemented code-level security and data validation (type, format and completeness checks, sanitization before submission to the national repository) and enforced WCAG-conscious accessibility across components.
- Integrated front-ends with backend REST APIs and authentication, handling asynchronous, real-time data flows across multiple sources, and partnered with design and backend teams to codify designs into clean, maintainable code.
- Owned production support and the modular re-architecture of the platform's new version, cutting reporting issues from ~65% of cases to 2% and enabling independent, fault-isolated deployment.

Front End Developer

Aug 2022 – Oct 2023

Admoni Inc · Advertising Technology

- Led front-end development of a rewards-based platform serving 100,000+ active users.
- Built an analytics-driven admin dashboard with data visualizations that raised conversion rates from 20% to 80%.

- Developed a reusable React component library that accelerated feature delivery across teams by 85%, modernized a large legacy JavaScript codebase into React + TypeScript, and cut time-to-interactive by 50% through route-based code splitting.

Front End Developer & Team Lead

Jul 2022 – Aug 2022

Calmglobal Infotech Ltd · Social Platform

- Built a social networking application with family-tree and family-history features.
- Led a 10-person front-end team on architecture decisions and engineering best practices.
- Championed TypeScript adoption across the codebase, reducing runtime errors by 80%, and implemented production observability and monitoring patterns.

Front End Developer

Jul 2021 – Dec 2021

Akl Solution (E-School) · Educational Technology

- Built a report-card templating system adopted by 500+ schools.
- Developed and maintained 20+ school websites, supporting an increase in student admissions from 40% to 80%.
- Built 15+ web applications following industry best practices, with responsive layouts and reusable components across projects.

Front End Developer

Jun 2020 – May 2021

Grapevine Innovate Ltd

- Built a web platform offering flexible payment plans to individuals and SMEs, with reusable UI components used across multiple modules.
- Developed responsive web applications following atomic design principles and a clean, maintainable component structure.
- Migrated a legacy React codebase to a modern React/TypeScript architecture, improved Lighthouse scores by 40 points and reached 75% test coverage.

EDUCATION

MSc, Information Management · Ahmadu Bello University, Zaria — Jan 2025 – Dec 2025

BSc, Computer Science · University of Ilorin — Oct 2015 – Oct 2019
